Transcript of Mapping the Trump Shooting

it's the 13th of July in Butler Pennsylvania former US president Donald Trump speaks at a rally it's only days until he plans to accept the official Republican nomination he's just minutes into his speech when shots are fired take a look at what [Music] happened Trump got hit but survived [Music] someone tried to assassinate him in broad daylight here is how it unfolded Fern by the time this video is published new details might have emerged it's a hot sweltering early evening as tens of thousands gather here to see Trump Pennsylvania is one of six vital swing States that will help secure the win in the next presidential election Butler skews heavily Republican and it is a bluecar town this is a big crowd this is a big big beautiful crowd he is surrounded by supporters most are sitting or standing in front of the stage some sit on the bleachers Center left and right Trump's support staff and security including Secret Service agents are right at the stage behind him are three large buildings on the roof of the building on the far left and on the far right are Secret Service snipers they are constantly scanning the surroundings looking for threats they can be seen in this video filmed by a crowd member hello Butler and hello to Pennsylvania I'm thrilled to be back Trump begins with his speech things seem normal he turns to the right and points at a chart showing statistics on border crossings at the same time time several people in the crowd notice a man with a gun on the roof of a building close by he it's too late take a look what happened all of a sudden bullets start flying one even gets captured on camera another building about 400 ft or 120 M north of the stage the shots are coming from here on the roof the gunman is 20-year-old Thomas Matthew Kooks he is armed with an AR-15 semi-automatic rifle the gun was legally purchased by his father first he apparently fires around of three shots take a look at what happened Trump reaches up with his hand the first bullet pierces the upper part of his right ear he will later say that turning over to the right at that exact moment prevented the bullet from hitting him right in the head he Ducks down behind the podium and within 3 to 4 seconds after the first shot secret service agent swarmed the former president and Shield him with their bodies Crooks opens fire again immediately with five more shots right before the first shot by Crooks one of the snipers on the left roof behind Trump seems to detect the gunman and prepares to return fire take a look at what happened some Outlets report that these snipers killed Crooks while the secret service confirmed its Personnel neutralize the shooter we could not corroborate that it was in fact these specific agents the gunmen also hit spectators on the bleachers one man died 50-year-old Cory comprador two others were critically injured with Trump's microphone still on we can hear the tense exchanges among the agents on ready on you Mo about 42 seconds after Crook's open fire they confirm the shooter is down we good Shooters down are we good to move we clear we we're they prepare to escort him to an armored vehicle let me get my let me get my I got you sir I got you sir let me get my shoes hold that in your head bloody so we got to move to the to the let me get myo okay watch out wait wait wait in about 75 seconds after ducking to the ground Trump raises his fist he's mouthing the words fight fight fight the resulting photo immediately travel around the entire world the crowd starts to Champ for the former president as he leaves the stage leeding

Trump is then rushed to a hospital later that night he has flown to New Jersey he appears to be well there are a lot of questions we don't have an answer to right now why were the forces unable to prevent the attack analysis on X suggests that at least the snipers on the roof behind Trump were likely Scouting For dangers further away with this rooftop possibly falling into the responsibility of other law enforcement agents we were unable to corroborate that why couldn't our men climb up on this building what was Crook's motive the Gman had no criminal history in Pennsylvania's public court records the New York Times found a voter registration record for Crooks it shows that he was registered as a republican they also found that he donated \$15 to a liberal voter turnout group through a democratic donation platform in 2021 he was a kitchen worker and had a membership at a local shooting club the FBI found suspicious devices in both his car and home they are being evaluated by the agency at the time of this recording the investigation is ongoing and new information is being published by the minute President Biden and various leaders around the world condemn the attack and political violence at large the picture of Trump bloodied but defiant with a raised fist in front of the American flag will surely become a powerful symbol in his re-election campaign

Transcript of The Hunt for the Charlie Kirk Shooter

On Wednesday, September 10th, Charlie Kirk was murdered in broad daylight. He was a prominent right-wing political figure in the US and had just started a new campus tour. His first stop was at Utah Valley University in Orin. He left behind a wife and two children. Immediately after his assassination, the hunt for his killer began. Now, authorities have identified a suspect. This is how he was caught. If you read this, you are gay. L M A O capital O wo what's this question mark? For an initial mapping of the video, check out Ho's video. Link is in the description. Kirk got into politics really young and started Turning Point USA when he was just 18. The organization is committed to promoting right-wing views in schools and universities. Kirk reached millions through social media and his podcast. He toured colleges to debate students and had become a close Trump ally. He is said to have played an important role in Trump's re-election. Phone footage from the event shows the likely shooter on a roof about 430 ft or 130 m away from Kirk's tent. He seems to be in a prone position. Kirk is engaging in a discussion with a student. How many mass shooters there have been in America over the last 10 years? Before the student can respond, the

shooter fires a single shot. Kirk is hit in the neck and rushed to Tempenogga's Regional Hospital immediately after. In footage from the event, a person dressed in black can be seen sprinting off the same roof after a shot was fired. According to authorities, he ran back here and jumped down here. Shortly after, the authorities released photos of the suspect and a video where he can be seen climbing off the roof and running off into the surrounding neighborhood. The FBI offers a \$100,000 reward for leads. At this point, a manhunt of tremendous scale is unfolding. Heavily armed officers are at the scene. Authorities confirm that they found a high-powered bolt-action rifle in a wooded area. Increasingly, the FBI is under pressure. Two suspects are brought into custody, but released shortly after. 24 hours pass and no one has been caught. Meanwhile, the suspect, Tyler Robinson, seems to have told a family member that he shot Kirk. The family member is believed to be Robinson's father, a veteran law enforcement officer. Robinson grew up in Washington, Utah, about 3 hours away from the university. The father reportedly told a family friend who in turn informed the authorities. Robinson turned himself in late Thursday evening in St. George, about 250 mi or 400 km from Utah Valley University. Robinson's roommate reportedly showed Discord messages to investigators. According to CNN, the messages included Robinson stating a need to retrieve a rifle from a drop point, leaving the rifle in a bush, visually watching the area where a rifle was left, reference to having left the rifle wrapped in a towel, reference to engraving bullets and the rifle being unique, mention of Robinson changing outfits. Trump makes the capture public on Fox and Friends. Looking real good. They have the person that they wanted. Next, Utah's governor steps in front of cameras. Friday morning. Good morning, ladies and gentlemen. We got him. Investigators interviewed a family member of Robinson who stated that Robinson had become more political in recent years. The family member referenced a recent incident in which Robinson came to dinner prior to September 10th. And in the conversation with another family member, Robinson mentioned Charlie Kirk was coming to UVU. They talked about why they didn't like him and the viewpoints that he had. The family member also stated Kirk was full of hate and spreading hate. Robinson is said to have engraved phrases such as hey fascist catch and bellachchow on cartridges found with his rifle. Bellachow is most likely a reference to the Italian World War II anti-fascist anthem. On the hey fascist catch symbols are engraved as such. Likely a reference to a controller sequence that releases a bomb in the game Hell Divers. In addition, inscriptions on a fired casing read, "Notices bulges, capital O, what's this?" Notice Bulge, "Oo, what's this?" is a trolling meme. On a fourth bullet, according to Cox, it said, "If you read this, you are gay. L M A O." Amid such a heated political atmosphere, this press conference is bound to reverberate across the US. In a statement prior to the capture of Robinson, President Trump had blamed the rhetoric of the radical left for violence such as this shooting. For years, those on the radical left have compared wonderful Americans like

Charlie to Nazis and the world's worst mass murderers and criminals. This kind of rhetoric is directly responsible for the terrorism that we're seeing in our country today, and it must stop right now. Cox on the other hand said this. We can return violence with violence. We can return hate with hate. And that's the problem with political violence is it metastasizes because we can always point the finger at the other side and at some point we have to find an offramp or it's going to get much much worse. The allegations against Robinson have not yet been proven before a court. Reporting like this is very resource intensive. It's made possible by our commercial partners. The reason we could get this video out this fast is because of our render farm, Super Luminar. It is the most affordable, fast, and easy to use Blender render farm on the planet. Now you can use it, too. If you sign up using the code Fern, you'll get \$10 in credits on a single purchase. If you use our link, fern.deals/supluminar, Teals/superluminar.

Transcript of The Evil Design of Japan's Death Penalty

[Music] today most of the developed world has ended the death penalty but in 2024 there are still two countries in the oecd that use it the United States of America and Japan but while the US has been transparent about its ultimate punishment Japan has kept its practices secret for years it was only in 2010 that the world was finally shown the evil design of Japan's death penalty July 26 2022 Tomy her oato is sitting in a Cell in the Tokyo Detention Center 14 years ago he killed seven people and injured 10 in 2011 tomato was sentenced to death every day he wakes up at 7:00 a.m. and heads to bed at 9:00 p.m. in a Cell that's the size of about four tatami mats he has a sink a commode bedding and a small desk in Japan death row inmates can wait decades for an execution but unlike the US they wait for a day they never really know is coming any random morning the inmate can be taken to the execution chamber they're given no more than a few hours notice the Japanese state says that this helps with emotional stability that it reduces the chances of an inmate taking life some argue it's Justice their victims weren't given notice either others say it's inhumane for 34 years a man named Menda Saka didn't know which day would be his last in 1983 he was freed the police officer who arrested him revealed that he had concealed sakai's Alibi that

proved he was innocent 12,410 mornings with an unjustified fear for execution in 2014 Iwata was also released and given a retrial due to possibly falsified evidence he was the longest serving death row inmate on the planet Iwata spent more than 45 years in prison waiting in the Tokyo Detention Center Iwata sits in his cell he's surrounded by objects purposely made rounder so that he can't finish off his sentence earlier than expected on July 26th 2022 after 14 years of waiting he hears more noises than usual outside of his door today the majority of the developed world has outlawed the death penalty but Japan is strange this book explains why even though it's still legal in the US it's debatable the United States is a federal divided country many states have phased out the death penalty entirely Japan on the other hand is a centralized state where polls have shown that the public supports it with a clear majority the US's death penalty is intimately connected with its history of racial discrimination and enslavement Japan is ethnically homogeneous and has less inequality the fall of an authoritarian leader like Hitler, Melini, Salazar and Franco all led to the abolition of the death penalty in their respective countries Japan's authoritarian State also fell but the death penalty remained in Austria, Great Britain and France the election of a left-wing government all led to the abolition of capital punishment in 2009 Japan elected the center left democratic party of Japan the death penalty stayed but what makes Japan's situation even stranger is how uniquely brutal it is its homicide rate is a fraction of that found in the US and it's lower than all the European countries which have abolished the death penalty nevertheless the percentage of murder offenders sentenced to death in Japan and the US are around the same in 2018 15 Japanese prisoners were killed with about 616 inmates on death row that's 10 less than the US is 25 which had more than 10 times the amount of inmates on death row seven of the 15 executions were part of the Aum Shrii doomsday cult the Japanese State sometimes executes in batches all seven were killed on the same morning while the US explicitly treats the death penalty differently from other criminal sentencing in Japan it's treated like other criminal punishments to be put to death in the US you must go through a bifurcated trial system there is a criminal trial for determining guilt or innocence which requires unanimity after if determined to be guilty it goes to another trial for deciding the punishment here you must receive again a unanimous agreement from the jury then the judge can serve you the death penalty Florida and Alabama are the only exceptions but these two states are outliers in the US context and they still require a super majority in Japan it's different under the cin system citizens act like judges they sit alongside professional ones to determine both the verdict and the sentence of a crime all that is required for the death penalty is a majority in theory five judges on the panel can believe the defendant is guilty and deserves the death penalty while the other four could believe the defendant is innocent and deserves no punishment whatsoever with this close of a vote the defendant can be sentenced to death in Japan there are seven detention centers that execute the death penalty

it's the Justice Minister who decides when it will take place 5 days after he or she signs the warrant The Prisoner is put to death these are usually signed right before political recess moments where media coverage is limited the executions are not made clear to the family members and lawyers of the inmates they only learn after it's taken place Kato is brought into a prayer room here he is read his last rights by a spiritual adviser he is given time to write a will and maybe to consume some snacks or even smoke a cigarette afterwards he's taken into another small room with an altar if they're Buddhist it will be a figure of the Buddha if they're one of the few Christians in the country a crucifix in this room the execution order is officially read out by the prison Warden the last thing Kato sees are the blue curtains covering the Next Room the guards wrap a bleached white blindfold around his eyes throw a black hood over his head handcuff his hands behind his back and tie his knees together he is taken to the next and final room in the US lethal injection is the primary method of executing the death penalty in Japan hanging is the only method at the center of the room room are two red squares an inmate is made to stand in the center beneath is a trap door connected to an adjacent room when the inmate is in place three officers enter this room they do not see the prisoner what they see instead are three identical buttons two do nothing but the third opens the trap door the three officers do not know which one is the kill switch this divides the responsibility between all three it's also been mentioned that there is a delayed circuit to hide who pressed the kill button if they were pressed at different times but I could not find a good source to confirm this for their service all three officers received 20,000 yen about \$180 each watching the execution are a few officials the head of the Detention Center a medical officer and the prosecutors the medical officer waits for 5 minutes until confirming the death after the body is cleaned the families are notified the body will be cremated unless the family specifies otherwise in the case of some high-profile inmates the ashes are kept in state custody it was only in 2007 that the Japanese government even released the names of those put to death currently there are 106 inmates awaiting their execution in Japan the last person sentenced to the death row killed 36 people in an arson attack tomato was the last person executed in the country I only felt comfortable putting this video in production after it was confirmed that a very specific organization would sponsor it if topics like this one make you feel eager for positive change in the world you should check out 880,000 hours it's an independent nonprofit that understands that your time is limited and it wants to help you find a career with more positive impact it helps you identify the most pressing problems which careers make a difference on those problems and how you personally might be able to make the most difference you can access their completely free career guide for practical research-driven advice on how to plan a career that's fulfilling and meaningful check out their free career guide at [8000 hour.org](http://8000hour.org) hoo

Transcript of The Tokyo Subway Attack

downtown Tokyo March 20th 1995 two men are driving to the subway station R hour is about to start they make a pit stop at a convenience store the driver buys two newspapers the passenger gloves a knife tape and sandals the passenger is dropped off in front of the station his train is arriving shortly he boards the front carriage and after three stops he takes a package out of his bag and drops it onto the floor it's wrapped in newspapers from the convenience store he takes the sharpen tip of his umbrella and drives it into the package a few more holes for good measure the driver is waiting for him outside he makes sure that any liquid left by the package is gone the liquid the man just released on the Tokyo subway is over 900 mL of sarin one of the deadliest nerve agents on the planet on March 20th 1995 at the height of morning Rush Hour Tokyo was attacked Emergency Services overwhelmed hundreds of calls flood in people are dying in the Tokyo subway the man iuo Hayashi was one of five people who released almost 5 lers of liquid sarin in the cramped and poorly ventilated compartments of three Subway Lines chiota ibia and maruno three lines that converge at a single point the heart of Tokyo's government it was an attack ordered by a blind paranoid man but it was a man with a billion dollars an arsenal of deadly chemical weapons and hundreds of loyal followers willing to use them he brainwashed thousands with a perverse system of spiritual superiority with a final goal to save the world by ending it this is the story of the Tokyo subway gas attack this video was made possible by 80,000 hours and the research was done by Robert J lton lan reer aruki murakami and countless [Music] others chitsu Matsumoto was born to a family of tatami mat makers he couldn't see through one eye but had some Vision left in the other as a child he was sent to a special school there he used the eye that he had left to control his fully blank classmates he forced them to strike each other helped some go into town on the condition of money and favors teachers said he was tender to some brutal towards others 20 years later he graduated and became a Mur and acupuncturist 3 years later he met his wife with the help of her parents he opened up a store that sold Chinese herbal medicine discovering a talent for selling snake oil he made hundreds of thousands off of fake drugs and Potions but Matsumoto was more talented at selling than hiding he's caught and served a jail sentence going bankrupt and experiencing profound shame he grew resentful of the state that took from him in his darkest hour he meditated practiced yoga read Eastern philosophy and studied he embraced Buddhist concepts of karma Redemption and rebirth and built his own interpretation with new found confidence he starts a new business a yoga school and Publishing Company Matsumoto becomes a guru determined to fix the mistakes he made earlier he combines his

skills for marketing with spirituality a photo of him levitating appears in a magazine photos of him getting endorsed by spiritual leaders he does interviews and tells the world that he wanted the Japanese Countryside when a deity appeared before him it told him he was the God of Light who will lead the armies of all the gods to usher in the Holy Kingdom of Shambala through a final war that will end all Darkness TV appearances radio shows magazine interviews deceptive photos and articles are paying off he leaves behind his old self no longer chitsu Matsumoto a failed salesman the boy raised by tatami mapmakers now shoko asahara a guru with a father following the name of his cult omin Rio Supreme truth but his cult is not like others he's surrounded by brilliant scientists chemists physicists Japanese from Elite universities and families asahara had a goal a goal that needed talent talent that would help him build a new Japanese civilization after Armageddon with him at its Center [Music] in his own mind and that of his followers he was a God the closer you were to him the higher your rank to move up he created tests he filtered members for their devotion and talent and began targeting the young and educated holding talks at top universities asahara crafted a message that Blended spirituality with science he offered outfitted research Labs alongside Enlightenment he marketed himself to those who felt alienated from Japanese Society sexual advertisements to Target lonely young men flirtatious women on the answering machine most ignored his advances but some did attend his talks these were Sam minay one foot in oh the other is still in Japanese Society the lowest of his hierarchy once a novice The Next Step was a loyal member a s only a Sam could truly join the Master they could unlock supernatural abilities like asahara levitation telepathy and mind reading but they had to cut off their lives as s had to renounce their family property money work and even their names they had to give it all to om Shin Rio during their initiation they participated in Mass prayer ceremonies they were given high doses of LSD and were locked in small rooms for weeks SAS were forced into celibacy they were forbidden to love or to ejaculate for young men who joined a religious death cult the former significantly easier than the latter they endured exhausting breathing exercises long hours of meditation and were sometimes expected to rise and kneel 100,000 times in a row on top of this schedule each member was given heavy unpaid labor it was normal for them to only get three hours of sleep a night this was required for asahara to co his stock the line between punishment and training was blurred by Design long exposure to scalding hot and freezing cold water hanging upside down for hours SAS were told this was training the only way to rid themselves of bad karma karma is a core belief in Buddhist tradition good actions bring good results bad actions bring suffering traditionally weaponized by white girls with dreadlocks who call their exes narcissists asahara used it differently according to him it could be removed through physical means like aeis and self- torture if they worked hard enough they could also remove it from others by the late ' 80s his operation had matured his goals shifted from acquiring followers

to using them he tells them of his Shambala plan their movement would spread and transform the world into a utopian Paradise he launches a new headquarters near Mount Fuji they start acquiring rural plots of land to build Lotus Villages these were isolated communities of omers that were models for their new civilization the beginning of his state within a state he knew the power of vision well so he hid his followers from the outside in September 1988 a s is hung upside down at the Mount Fuji Center he had been showing signs of mental illness during the Colts rituals they immersed him in ice cold water to calm him down he dies that wasn't supposed to happen aahar and Company are worried this could ruin their entire operation they tell no one and they burn his body and hide his ashes by dropping them in a lake first crisis averted but now they had a new problem the men's friend shuji taguchi saw what happened and threatened to leave and sniff [Music] that wasn't supposed to happen as asahara's fear isolation and power grew so did his interpretation of karma everyone outside of om was infected with Bad Karma if they died they would suffer in the afterlife his members however were spiritually Superior equipped with the ability to take on their karma they had a duty to elevate people's Souls a spiritually Superior person could cleanse them of their Bad Karma by killing [Music] them on the orders of asahara the had tooa shuji taguchi he was strangled by five members in a small tatami cell asahara's first real kill his cult was no longer a small yoga studio asahara had given them a spiritual right to m if he organized them properly he could do even more but the larger it grew the more attention it drew people were starting to take notice of the strange cult with colorful robes Tatsumi Sakamoto is an anti-cult lawyer he knows om se's assets and holds members against their will one day he decides to do something about it months after first POA he records an interview he tells the Tokyo broadcasting system of the Colts predatory tactics to not cause offense the TBS show senior figures in oh the interview out of fear to make sure they wouldn't get sued a few days later a few men walk up to an apartment complex in the suburbs of Yokohama at around 3:00 a.m. armed with hammers hypmic needles and potassium chloride the men enter the Sakamoto residence through an unlocked door they find Sakamoto and his family sleeping they hit susumi in the head with a hammer he's injected with potassium chloride and strangled at the same time his wife is also injected beaten and strangled to death the men proceed to murder their son they remove all three bodies from the apartment just another compassionate Act of Salvation asahara explained asahara had killed twice without consequences his vision expanded he saw the absolute loyalty of his followers there was no limit to what he could make them do anyone opposing the group was labeled as evil and marched for elimination soon that meant the entire world similar to the Nazis during World War II om viewed Society outside as filled with inferior people who did not deserve to belong to the new world they were creating spiritual superiority replaced racial superiority oh members became Gatekeepers of life and death

with the ego that only a very serious meditator has asahara truly believed he was the second coming of Christ Shiva and other deities but proving he was God brought problems he made world ending predictions Tokyo and Japan would sink a World War would erupt between the USA and Russia in 1999 nuclear war in 2003 he needed these Visions to seem larger than life but they also had to come true if they didn't it could show his followers that their Emperor wore no clothes but asahara specifically crafted his organization to make his Visions real om was divided into Ministries and agencies each run by a high ranking member chosen for their expertise and dedication these were the upper ranks his inner circle isako ishi built a war chest an office worker in her former life she showed exceptional administrative skill she helped om amass \$1 billion in assets asahara's bathwater cost \$1,000 his blood 10,000 nothing was off limits when followers became SAS their assets were seized including valuables co-owned by family members they took advantage of their followers cheap labor to launch new businesses fitness clubs real estate dealings restaurants and even babysitting and dating services they undercut the Japanese computer Market by assembling and selling computers for cheap eventually they went International a Tea Plantation in Sri Lanka a sheep farm in Australia they used shell companies to purchase a variety of high-tech equipment chemicals and pharmaceuticals eventually used in the manufacture of drugs and weapons under the leadership of isi om assembled the necessary Capital now they needed to make sure they could keep the operation running smoothly without problems iuo Hayashi was a member of the Japanese Super Elite he attended one of Tokyo's top private universities he later became the head of a medical department at a hospital with the help of 10 resident doctors he set up the astral Hospital Institute to keep the cult membership in check here they detained tortured blackmailed and killed members and their families om doctors conducted spy checks injecting suspects with truth serum drugs and interrogating them Hayashi introduced new Narco treatments combining these drugs with electroshock therapy to try and erase members memories they removed fingerprints and changed facial features to disguise their crimes anything to protect asahara's plans for Armageddon overseeing high-tech weapons was AO marai he graduated from Osaka University with a degree in physics he studied the X-ray emissions of celestial bodies Mari worked closely with asahara who ordered him to make devices that could prove he was enlightened Nicola Tesla's earthquake machine a plasma weapon that would vaporize only humans and leave infrastructure intact so om could inhabit the empty buildings after the World's End these experiments LED nowhere asahara needed something his fear of losing kept growing he forced Detention of members who tried to leave kidnapped those who did he played tapes to members where he showed Wars all over the world discussed weapons of mass destruction and preached that they were under attack from the US the CIA the Japanese government Freemasons the emperor and the Crown Princess he had to do whatever he could to maintain

control but his Visions to prove he was a god weren't coming true until they did in 1995 he assigned a member to predict natural disasters by making astrological calculations on live radio the man gave a semi-educated guess an earthquake would happen around noon 9 days later over 5,000 people lost their lives in a devastating noon earthquake for his followers this was indisputable evidence that Asahara could see the future Armageddon was coming members were afraid for their lives while he gained time to get his followers to fight in his final war for Shambhala to cleanse the world of its Bad Karma saving it by ending it he turned away from fantasy weapons to proven ones the Ministry of Health and Welfare was responsible for biological and chemical weapons at its Main laboratory around 100 scientists work with equipment costing upwards of \$30 million Sichi Endo dropped out of his graduate program in virology at the Kyoto University Medical School to join M. Masami Tania was a graduate student in organic physical chemistry at one of Japan's leading universities a part-time prep school teacher before joining they were handpicked by Asahara to find his weapons Bacterium toxin is made by bacteria under low oxygen it's among the deadliest known substances Endo started by harvesting it from soil samples then he built large cubic fermenters to produce batches approximately 50 they drove through Central Tokyo and Nita airport the largest in Japan spraying devices were mounted inside it would be a mass Terror attempt that would topple the government the van sprayed the toxin into the air but nothing happened the release was a failure spraying it was more difficult than manufacturing but Endo was determined so he tried again this time the Imperial Palace during a royal wedding of the Crown Prince it would be a mass Terror attempt that would topple the government the van sprayed the toxin into the air but nothing happened botulism botched again the third times the charm and a must have thought maybe so one more attempt was [Music] made three briefcases equipped with sprayers were placed near the ticket barriers wandering passengers workers Tokyo's government Elites would be unknowing targets and nothing happened but Endo didn't stop there Anthrax is an infectious disease caused by bacteria that live in soil animals become infected while grazing humans can get infected by Cuts in the skin breathing it in or eating contaminated meat inhalation is the most dangerous the most relevant for weapons without treatment it's fatal Endo probably got a harmless strain from a friend still in school some believe he tried to create a lethal one by combining two harmless ones he moved it to mass production ever cautious they tested on the roof of their headquarters and this time they succeeded sort of they made the street smell bad and killed a few birds and pets but something had [Music] worked they turned the anthrax into powder and drove it through Central Tokyo it would be a mass Terror attempt that would topple the government the van sprayed the toxin into the air but nothing happened 's biological weapon attempts were almost comical if they weren't so disturbing Asahara even sent doctors to Central Africa to bring back Ebola that failed attempts at cholera and Q fever also fell short

despite this om had other weapons they could still use Masami toia LED their chemical weapons program they made tabun gas mustard gas Som hydrogen cyanide and fosen they killed 20 dissidents by scorting them with thex they tried to kill a journalist a friend of the lawyer tsumi Sakamoto with fosin gas she escaped injured multiple hydrogen cyanide attacks were attempted but failed despite their investment the chemical weapons were rarely used at scale there was only one weapon they used that was different a weapon that in asahara's mind had no equals sarin is colorless and odorless exposure causes symptoms in seconds larger doses death in minutes asahara was obsessed he channeled all of 's infrastructure into its production they first used sarin on a small herd of sheep on their Australian Ranch and it was a success they moved on to human trials two o members pull into a parking lot 37 M away from a three-story apartment inside are three lawyers they were fighting m in a real estate dispute and winning the men switch on the machine waiting for it to heat up and vaporize the 30 L of liquid sarin tubing directs the gas to fans on its side for 20 minutes it flows into the [Music] air but a slight breeze shifts it away from the lawyers and towards neighboring homes sarin enters through open Windows and is pulled into Apartments via AC the next morning three people are dead two more dilator in the hospital not one was one of the lawyers sarin had worked now it was time to scale it asahara ordered tosia to produce 70 tons of sarin if everything went according to plan they would release the gas over Tokyo if everything went according to plan there was a spill at their laboratory this led to reports of a foul smelling odor near their headquarters police gathered soil samples they identified two compounds linked directly to the production of sarin a newspaper reported it was suspiciously close to where om Shin Rio had a commune the higher ranks panicked they ordered the destruction of their illegal chemicals including all their sarin stores within a month om built a wall inside the building hiding the lab equipment and decorating the room to look like a prayer Hall the police didn't make a move despite Panic inside the organization it still seemed like they could get away with anything but then they made another mistake cult members abducted a man whose sister had fled the group om wanted her back because she was wealthy but her brother would not reveal her location kept barely conscious he was drugged and imprisoned he died of an overdose but his abduction was witnessed a bystander reported the van's license plate and the police traced it to a member combined with the sarin soil samples this was the final straw the police planned a raid on the M headquarters [Music] but asahara knew police informants leaked him the information about the incoming raid so he told marai to divert it he ordered an attack on the Tokyo subway in 2 days marai had little time and no sarin so he Enlisted the help of Hayashi endo and nakagawa in 36 hours he managed to produce over 10 lers a spraying device was too unpredictable this time they keep it simple plastic bags and sharpened umbrellas the Tokyo subway is the busiest in the world it moves almost half the world's population every year 3.9 billion people the Metro spends

286 stations on 13 lines despite the city's sprawling layout it's known for its efficient design 22% of all of Tokyo's residents use it every day at 3:00 a.m. on the day of the attack the team rehearsed with water Hayashi then gave them all a hypmic needle with atropine sulfate a sarin antidote before rush hour five cars set out to five different subway stations a kuo Hayashi boards the South westbound chiota line departing from Sagi subway station he continues his journey for three stops puncturing his bag of sarin just before reaching his last station he exits the train which continues to Kasumi gaki none of the passengers notice a thing 26-year-old kiyoka isumi takes a deep breath as the air fills her lungs it suddenly freezes in her chest pain spreads through her and she doesn't know why she feels like she's been shot as the train approaches Kuma gaki station she starts to violently cough everyone around her too [Music] applied physicist toru Toyota boarded the first Carriage of the north eastbound hiia line he continued his journey for only one stop puncturing his bag before leaving at a bitsu station all 900 mL of sarin leaked out the passengers evacuated The Carriage three stops later the train continued with an empty front Carriage until kasuma gasak station where it was taken out of service masado yokoyama boarded the fifth Carriage of the magoi Line train to kabukuru when he had approached his last station he poked his packets of sarin but only one was punctured he cleaned the umbrella in the bathroom and got into his driver's car since the package was mostly intact sarin was released very slowly it was only when it reached the end of the line and returned that the package was discovered the car was quickly wiped down but it continued and completed another full Journey he was finally taken out of service 1 hour and 40 minutes after yokoyama had punctured his package on the other end of the hiia line asuo Hayashi boarded the South westbound train to prove his Devotion to asahara he had volunteered to take an extra package of sarin the packages immediately began to smell causing passengers to feel ill as soon as they reached the following stop a man kicked the package onto the platform a Kota Macho station the small area quickly filled with the gas the train kept going with a puddle of sarin on the floor an overwhelmed passenger pressed the emergency button but the train was in a tunnel and had to continue until the next stop it finally stopped at sujii station where five passengers collapsed on the [Music] platform Kenichi Hil boarded the westbound marinoi line at iabuk station he punctured the packets of sarin and exited the train all 900 mL of sarin were released two p passengers collapsed by the time the train reached Nano Sak station they were evacuated and a station attendant removed the package the train continued until the end of the line new passengers boarded the train at ogi Kubo station at 8:38 a.m. it continued in the opposite direction until two stops later it was taken out of service 's attack killed 13 people and injured more than 6,000 when it was determined that sarin was the cause om was connected within [Music] hours on March 22nd the police raided the OM headquarters and other Lotus Villages they discovered the infrastructure meant to produce chemical

weapons hideo murray The Mastermind behind the attack was murdered by Yakuza in public
asahara was arrested in late spring hiding in a hidden room covered in his own piss he and 12
other members were given the death penalty they were executed in 2018 while the attack
was terrible it could have been even worse tuia produced sarin at over 70% Purity for
Matsumoto that level was deadly enough to float into a neighboring house and still kill three
people under the pressure of time Endo had made a batch half as pure for the subway attack
because of the accidental spill in the previous year he didn't have access to all the chemicals
needed for production if he did the result could have been far different om was given official
religious status by the Japanese police it got tax breaks immunity from prosecution and made
it difficult taboo for police to investigate risk avoiding police and a paranoid man who knew
how to hide after his first business failed it wasn't a coincidence that he moved members far
away from civilization and described what they did with vague spiritual nonsense a yoga
studio that brought lonely people together peer pressure and isolation manipulated what
was acceptable then asahara slowly kept turning up the temperature he purposely hunted
individuals good at solving problems and he gave them problems to solve that were [Music]

Transcript of How Were the Pyramids Actually Built?

[Music] this is the Great Pyramid of Giza for over 4,600 years it has endured in the Egyptian desert for most of human civilization it was the tallest building in the world it was built to last for eternity because it was meant to house a god it has survived earthquakes erosions and wars countless plunderers British explorers blasting their way in with dynamite even Mr beast someone 4,500 years ago put this rock right here the 2.3 million stone blocks some of a mass of up to 50 metric tons make it one of the heaviest humanmade objects of all time it's also built with incredible precision its base is roughly the size of seven New York City blocks and almost perfectly level never deviating more than an inch the four sides are aligned to the cardinal directions with near perfect accuracy thousands of years before the compass was even invented to this day no one has found out how exactly it was built to really understand the Great Pyramid we modeled the whole thing and we will tackle three fascinating theories of its construction this is the insane engineering of the pyramids confirmed this is Kufu a pharaoh of ancient Egypt he's king of the wealthiest nation on the planet and he's a god he's going to live forever and he needs somewhere to live out his immortality a home that will last it will need to be incredibly secure to house all of his riches and it should also look amazing his father Snferu also a god is buried here he's the pharaoh who taught Egypt how to build its pyramids but the lines on his aren't quite perfect something went wrong kufu can do better he can bring even more glory to Egypt the nation is still mourning Nefaru's death kufu wants to lift the people up by drawing them into the most incredible project humanity has ever attempted and then surely they'll love him and later remember him more than his dad a project as grand and ambitious as the Great Pyramid can only be pulled off by a very wealthy and very organized nation the nation of Egypt is just that thanks in large part to the Nile every year the Nile overflows and fertilizes the land with rich top soil this gives ancient Egypt the ability to grow excess crops to keep its production wellfed and to sustain a standing army the army regularly goes out and terrorizes Egypt's neighbors plundering their wealth to bring home for the Pharaoh so Kufu has all the money he needs to build something very very extra but money isn't everything kufu also needs the smartest architect to design a building that will set him up for eternity there's only one man for the job kufu's halfb brotherther Hemi Unu he was born for the role a once in a generation genius the design for his pyramid won't just follow in his father's footsteps it will surpass it in every way he envisions a pyramid far grander more complex and more secure than anything built before a true quantum leap in

architectural mastery heu plans to build a pyramid primarily out of solid stone inside will be three burial chambers with a passageway leading to each the first is built underground in case Kufu dies early into the pyramid's construction the second will be hidden behind a false wall so nobody can plunder the riches inside leading up to the third and highest burial chamber is a majestic corridor with stunningly high corbelled ceilings the Grand Gallery the king's chamber will be breathtaking a chance for Hemiu to flex it'll be huge for ancient Egyptian standards it'll be built entirely from pink granite monoliths quaried far away from Oshwan fitted together so precisely that you couldn't slip a razor blade in between them inside a granite sarcophagus Kufu will finally be laid to rest once complete from the inside the pyramid will be encased in perfectly smooth white limestone it will dazzle in the sunlight and gleam in the moonlight finally a golden capstone the pyramidion will be placed on top once all is put in place Kufu will be ready for eternity building a pyramid might take an empire but to build your dream business you only need Shopify shopify is an amazing all-in-one platform we've personally used it since 2018 for a sustainable clothing project we started out with just an idea thanks to Shopify our brand now reaches customers around the world we built a beautiful storefront with ease we tracked orders seamlessly and get a ton of valuable insights from the dashboard one of our favorite tools is Shopify Live View you can see where customers are shopping in real time there are over 8,000 apps to customize your store like sustainable shipping options or loyalty programs shopify isn't just for online sales shopify point of sale helps you sell IRL perhaps in that pop-up store you always wanted to go for if you've been waiting for the perfect moment to start your own thing this is it any idea can grow into a fully developed global business with Shopify try it free today at shopify.com/fern or by scanning this QR code hemiu doesn't have time to waste the pyramid should be built as quickly as possible so that at least one of the burial chambers is ready before Kufu's mortal self dies heu is aiming for a timeline of 20 years for the whole project he calculates that the Great Pyramid will require up to 25,000 builders a significant portion of ancient Egypt's population of about 1 million so a great recruitment drive begins but how exactly did they do it well nobody knows the debate's been raging for hundreds of years and researchers are constantly uncovering new archeological evidence and bizarre engineering quirks that give birth to new theories sometimes with cuttingedge tech sometimes by sheer dumb luck there are theories supported by scientific research which we will cover and there's tons of dubious theories that rely on wild speculation which we'll ignore we've broken down three scientific theories about what the Egyptian secret could be in order of easy medium and hard imagine you and some co-workers have to hoist a block as heavy as a double-decker bus 130 m into the air the only tools your boss gives you are some rope some wood and some rubble if you've got something heavy you've got to move somewhere high the simplest most straightforward way is to just drag it up a ramp you tie it with some rope get help from

as many people as can fit on the ramp and heave it up together as the pyramid grows the ramp would be raised and extended to accommodate the increasing height easy no crazy advanced machinery necessary most Egyptologists have traditionally supported the external ramp theory it continues to be the go-to explanation for how the builders pulled it off and there's loads of archeological evidence that confirms ancient Egyptians used big ramps for construction all the time but there's no consensus on the size shape and incline of such a ramp that's because after a certain height the external ramp theory starts to fall apart to move a two-ton block up a slope you need a team of about 12 workers and as the pyramid starts to grow your ramp either needs to become steeper or longer to reach the top you're going to want that incline to be as gentle as possible otherwise the job is too intense and workers will start dropping like flies the remains of the workers suggest most were in decent but not spectacular health these were everyday people not super elite athletes many died before 40 due to the incredibly hard work engineers calculated 8% is the steepest incline for average workers to complete their task in consequence the ramp has to become longer to build a ramp to the full 147 m height of the pyramid at a gentle enough incline this ramp would need to be very very long like way more than a kilometer it would require a few million tons of material up to three times as much volume as the entire pyramid remains of such an enormous ramp haven't been found and it would take thousands of workers decades just to build it decades Kufu doesn't have to spare there is a way to keep the ramp shorter you could build a corkcrew ramp that spirals around the sides like a road winding up a mountain every time the pyramid grows the ramp grows with it and eventually just becomes part of the pyramid itself that would be a pretty ingenious way to save up on space and material and it would explain why we haven't found any remains of a ramp but it comes with a whole new set of problems the pyramid's triangular faces need to be accurately maintained at precisely 51.9° from the bottom to the top surveyors need to measure the edges constantly to ensure there's no deviation if you're off by even a few centimeters at the bottom the top could be off by several meters since the spiral ramp blocks your sight it's almost impossible to ensure that all the lines of the pyramid are actually straight which would leave you with a crooked pyramid at the end and as we know the Great Pyramid is in fact not crooked this brings us to theory number two it's the late 90s a French engineer Henri Odon is watching a documentary about the pyramids it explains the pyramid construction with the external ramp theory but Henri is skeptical to his engineering mind it just doesn't make sense he calls up his architect's son Jean-Pierre Odon and asks his opinion Jean-Pierre is intrigued without knowing much about ancient Egypt at all or even visiting the pyramid he starts puzzling over other ways the blocks could have been lifted he labors over it obsessively for years until he's finally ready to share it with Egyptologists most of them ignore him he's an outsider and it's a field notorious for gatekeeping a French guy who knows nothing because

there's no evidence but his theory has since gained traction because Odon has put himself into the shoes of Emmy thinking through every last detail his theory could even explain how the heaviest granite beams might have been moved without needing to be hauled by 600 workers here's a concise version and the Unu does use an external ramp for the first part of the pyramid up to around 60 m but he doesn't just build a basic ramp made of rubble no his ramp is made of limestone the limestone blocks that will later compose the upper layers of the pyramid that would explain why we haven't found any remains of a ramp around the pyramid they're right there in front of us the short external ramp is used to build the widest lower levels of the pyramid it's also used to haul the heavy granite beams that compose the king's chamber but hundreds of workers hauling a 50-ton block in a small space is logistically challenging so Adon believes Emmy Unu used the long 46 m corridor the Grand Gallery as an ingenious counterweight system it would have been built opposite the external ramp and its size and slope would be leveraged with counterweights that would assist workers in getting the granite up to the king's chamber the Grand Gallery is a weird space in the Great Pyramid it is details that puzzled archaeologists for a long time like why it's so tall so narrow and why it has stone benches running along the inside odon believes the Grand Gallery helps move impossibly heavy stones by functioning like a railroad track the stone benches are actually the rails for carts on wooden rollers remember no wheels essentially a huge granite block at the bottom of the external ramp would be attached with rope to a trolley car loaded up with heavy blocks at the top of the Grand Gallery when the trolley cars rolled down the Grand Gallery the heavy granite block would be pulled up the ramp there's even evidence of scuffing from the repeated impact of something heavy in the Grand Gallery so it's a possible explanation of what this unique corridor was used for once the heavy granite beams are in place the external ramp has served its purpose now the pyramid is too tall for it to be practical so the builders switch things up they dismantle the external ramp and use its blocks to start building the rest of the pyramid from the inside out with an internal ramp kind of like the driveway spiraling up inside a parking garage this second ramp would have been built from the bottom up with an incline of about 7% it would go straight up until it hits one of the pyramid sides where it would make a sharp left continue up another side at the same incline the ramp continues zigzagging up the pyramid with the flights of the ramp getting shorter as the pyramid narrows from the bottom to the top the internal ramp is over a kilometer long moving heavy blocks up an incline is manageable especially if you're using a sled over smooth limestone but each time the ramp turns a corner the workers have the enormously difficult task of pivoting the heavy stones odong calculates the ramp had to be less than 3 m wide and the workers would have needed somewhere to stand to turn the block so he proposes that at the end of each flight of the ramp there must have been a big space left open for the workers to turn the block possibly with the help of wooden levers or cranes the

empty spaces would also be a nice place for the workers to catch their breath there's actually evidence of one of these spaces there's a previously unexplained notch that corresponds to Odon's predictions for what the spaces would look like about 83 meters up the pyramid Odon's theories about the Grand Gallery and the internal ramp offer viable solutions to two of the pyramids biggest mysteries how two-ton blocks were lifted so high and how 50 ton beams were moved without the space for the hundreds of workers needed to haul them but if he's right the ramp's design would have been highly complex its path would have to be designed with great care to avoid intersecting with any passageways or chambers within the pyramid critics of his theory are either unconvinced that its construction is supported by archeological evidence or wave off the internal ramp as over complicated many suggest the external ramp theory is likelier because it's simpler but ancient Egyptian workmanship exhibits extraordinarily high levels of precision in so many aspects why not also apply this ability to a highly sophisticated ramp design and also why not entertain an even more sophisticated theory for how they built the pyramids in 2024 a flurry of newspaper articles announced that the mystery of the pyramids was finally solved thanks to brand new archeological evidence as it turns out the Nile might just be the key to the mystery of how the pyramids were built nowadays the Giza Plateau lies in an arid strip of the Sahara Desert kilome away from the lush banks of the Nile but during the time that the pyramids were built the landscape may have looked very different a 2024 study combined radar satellite imagery with deep soil cing techniques this way it identified what appears to be a long-lost branch of the Nile flowing alongside the majority of the pyramids the pyramid builders probably used this branch to move heavy stones straight to the pyramid base instead of dragging them all the way from distant quarries more than plausible that the builders use the Niles to transport the blocks horizontally but what about vertically another peer-reviewed study from 2024 offers a fascinating theory it proposes a radical and controversial idea the ancient Egyptians might have used hydraulic power to raise heavy stones in other words a water powered elevator the idea of such an elevator is not new but for a long time credentialed Egyptologists considered such theories fringe and unscientific just speculations cooked up by pyramidians they might sound cool but there was zero evidence to actually support them until perhaps now the researchers including hydraologists mechanical engineers and geographers found evidence that the earliest Egyptian pyramid could have been built using a floating wooden elevator capable of raising heavy stones with far less human labor the water elevator would have worked something like this rainfall and flood water would be collected into a nearby structure that functions as a dam a system of underground conduits guides that water into a shaft running from underneath the pyramid up through its central axis kind of like a volcano this internal shaft is where all the upward movement is generated within the shaft floating on the water surface is a heavy wooden platform which workers would load up

with heavy stones from the ground level then they'd open and close valves near the bottom of the shaft which would feed in or drain out the water manipulating the water levels in this way would raise and lower the wooden platform like an elevator they could raise the platform to heights of at least 17 m then workers would unload the stones and construct the pyramid from the inside out the study's lead author claims his theories could also help explain why later ones aren't as large as the Great Pyramid as the climate dried out of the region over time builders couldn't have captured enough water for a hydraulic lift system they'd have to rely on human strength to lift heavy stones so does this theory hold water experts are mostly skeptical zahiawas a leading figure in Egyptology says the theory is completely wrong the pyramid in the study is not only smaller than Kufu's Great Pyramid but differs structurally and was built of far lighter stones so if Kufu's pyramid were built with some kind of water elevator it would have to be bigger and perhaps more complex so far no comparable shaft is known to exist in the Great Pyramid ramps however are found all over archeological excavations of ancient Egypt so the most common theories continue to put forward some sort of ramp as the dominant construction model there are other potentially viable scientific theories that try to solve pieces of this puzzle one expert we spoke with suggest multiple smaller ramps from all sides to cut down on construction time but to this day there's still no generally accepted theory for how they did it in any case it's good to be wary of all the claims coming out about finally solving the mystery everyone wants to be the one to definitively figure it out the Great Pyramid is the last of the seven wonders of the world we have left it's so old even Cleopatra considered it ancient but even though they've been around thousands of years it's actually very strange we haven't found any blueprints for the pyramids the ancient Egyptians were obsessive we have their tax records their love poems their receipts for donkey feed purchases from 4,000 years ago but papyrie with plans for the pyramids have never been found whether the plans were lost hidden or intentionally destroyed we don't know but what we do know and what science might be at the brink of confirming is already very incredible in 2017 scientists discovered a mysterious void in the Great Pyramid using cuttingedge particle physics researchers have yet to access these spaces some archaeologists believe the big void isn't so mysterious that it's probably just structural built as a stressful leaving spaces so the inner chambers wouldn't collapse some believe it helped refine Udan's theory of the Grand Gallery counterweight system others including Egypt's top archaeologist Zahiawas suggest the void might be Kufu's real burial chamber because that's the other great unsolved mystery of the pyramids kufu's mummy and all his treasures have never been found whatever it's for the big void reveals there's a lot more investigation needed to fully understand the Great Pyramid [Music]

Transcript of How a Pilot Hijacked a Plane

At 9:27 am on the 24th of March 2015, a plane got in contact with the Marseilles enroute control center. It was an Airbus A320-211 operated by Germanwings headed from Barcelona to Dusseldorf. Everything seemed normal. The captain read back the air traffic controller's clearance at 9:30, allowing him to fly to an enroute waypoint. Only a few minutes later, something was off. The control center in Marseilles saw that the altitude for the aircraft was around thirty thousand feet, almost two thousand feet lower than the original cruise altitude, and declining. Marseilles contacted the plane and asked what altitude the plane was cleared for, but they received no response at all over the next 30 seconds, Marseilles tried to contact the flight crew two more times. No answer. At 9:34 the control center tried a different frequency, but again no response. From 9:35 until 9:39 the Marseilles control center tried to contact the flight crew multiple times over different frequencies. An air traffic controller from the French air defense system also tried as well as another aircraft but each time no response from Germanwings flight 9525. At 9:40 radar contact was lost. The French air traffic controllers triggered a distress phase declaring that the aircraft and its occupants were in imminent danger and required immediate assistance. At 9:41 am flight Germanwings 9525 crashed into the side of a mountain in the Alps. What happened? The crash occurred on a remote mountain. Because there was no access by road, emergency crew had to be brought in via helicopter. The plane was completely destroyed: the debris field vast but the pieces of the craft small. The cockpit voice and flight recorder were found in the same week although they were both severely damaged. When flight investigators stitched together the data a story of intentional action formed. The plane was hijacked, but not by terrorists. Let's go back. After the aircraft leveled off at its cruise altitude, the captain left the cockpit to go to the bathroom at 9:30. While he was in the bathroom, the plane was almost immediately set for a different altitude in the cockpit. At 9:34, the captain came back and requested access but he got none. The door was locked. As he stood in front of that cockpit door the captain began to understand. The co-pilot had hijacked the plane and he had no way of getting in. After 2001, cockpits were changed in order to protect those flying the plane from potential hijackers. To enter the cockpit, a crew member has to call the cockpit on the intercom and press the pound key on a keypad, which buzzes the cockpit. At that moment the pilot can switch the door control from norm to unlock, and the crew member can enter. The crew is also given emergency codes which they can use if there are concerns for those in the cockpit. In that case the crew member will use the emergency code on the keypad triggering a 30 second timer and the cockpit door will open for 5 seconds however there are situations

where those in the cockpit want to override the access by the crew like during a hijacking in that situation the pilots can switch the door control to lock overriding all emergency access. and it's that mechanism that the co-pilot used to permanently lock access to the cockpit while the plane began to descend. The captain was locked out of the cockpit without any control. At 9:39 the cockpit voice recorder picked up violent blows on the cockpit door. The captain had repeatedly tried breaking in to gain access but the cockpit door was reinforced. Made to withstand armed hijackers the captain stood little chance. In the last minutes the passengers crew and Captain all knew that the plane was going down. No one survived the crash. 144 passengers four cabin crew and the captain and co-pilot died. Amongst the passengers was an entire school class returning from a field trip to Spain. The captain Patrick Sondenheimer was a 34 year old father of two. In the aftermath his wife set up a foundation in his name intended to help children and young people handle grief and crisis. He had thousands of total flight hours and his last moments were dedicated to trying to save the plane and passengers. The co-pilot was 27 years old and from a young age he was passionate about flying. His bedroom had posters of Airbus Boeing and Lufthansa and he'd become an expert glider pilot as a child. He joined lufthansa's Flight Academy straight out of school, but only a few months into the program he stopped. He was suffering from a deep depressive episode treated with antidepressants and spent multiple months in the care of a psychiatrist. Eventually he received a medical recommendation declaring that he was in remission. After a few months his student pilot license and fit to fly medical certificate were restored, but if he needed any more psychiatric treatment he'd be grounded from flying. But he continued with his training until he ran into a problem. While filling out a document required by the U.S Federal Aviation Administration to fly at an Arizona based Lufthansa operated flight school he said that he had never been diagnosed with any mental disorders. This was a lie and he got caught. Lying on an FAA application can lead to a jail offense or the end of a flying career, but the FAA gave him a second chance. He admitted to depression and was accepted to go to Arizona. In 2013 he joined Germanwings a low-budget Airline owned by Lufthansa. And a year later his depression returned. He thought he was going blind visiting ophthalmologists and neurologists multiple times per week because he was seeing stars, halos, flashes of light, streaks, and flying insects. But the doctor's scans didn't find much. He was diagnosed with hypochondriacal disorder as well as emergent psychosis from his family doctor. And that doctor urged him to go to a psychiatric clinic, but he do no such thing. Instead in January of 2015 he returned to the psychiatrist that had helped him in the first place. He received Psychotherapy and went on heavy antidepressants while continuing to work and fly. From February to March he received multiple sick notes from multiple doctors. He wasn't alright and he wanted something to change. Four days before the crash he turned to his computer to understand the locking mechanism on the Airbus A320 cockpit

door. On his outbound flight from Dusseldorf to Barcelona he tested the descent settings for a moment while Sondenheimer was outside the cockpit. On the return flight he used it to bring down the plane. How could this have happened? Pilots are required to do Health screenings and annual checkups, but mental health is easier overlooked than physical. Since Pilots operate under an honor system they're expected to self-evaluate their health. And this can be an issue. The co-pilot was declared unfit to work by his doctor, but he decided to just not tell his employer. But if someone like him is a risk to Public Safety a doctor can break doctor-patient confidentiality and report him to authorities. So why didn't at least one of the multiple doctors who wrote multiple sick notes and declared him unfit to fly think that the co-pilot may have presented a risk for public safety? Enough of a risk that he couldn't be trusted to report himself? We don't know. The doctors may have believed the co-pilot was a risk to himself but not to others. Being depressed does not make you a killer. Or maybe the doctors were just scared. Breaking doctor-patient confidentiality does not come without risks. It's even possible cultural factors could have played a role. Privacy and data protection are valued really highly in Germany. But trying to understand why doctor patient confidentiality wasn't broken is a dilemma an issue best left to healthcare professionals and ethics professors. And unfortunately we're YouTubers. So we encourage you to read more about it in these articles. Nonetheless when you're watching this today it's important to understand that this type of incident is incredibly unlikely. In the aftermath the European Aviation safety agency proposed multiple safety regulations. Psychological screening for pilots increased and multiple Airlines adopted a two-person in the cockpit at all-time rule although Lufthansa has recently phased this out. In 2015 Germanwings was rebranded to Eurowings. The decision was made prior to the crash. In the end Lufthansa compensated the families of the victims but there are questions about whether it was enough. The families have faced losses that no money can heal. Hopefully you enjoyed this video, it was insanely hard to make. We love animation and deep research but it's expensive. That's why we have sponsors on this channel. By the way a lot of our animation in particular actually has a lot to do with math, be it geometry or linear algebra for specific shaders or code for scripted and procedural animation. Both can be exciting and fascinating especially if taught in a playful manner. That's where Brilliant comes in. It gives you skills that can be applied to everything literally, be it basic logic artificial intelligence data science or physics. But it gives it to you in a way that isn't earth-shatteringly boring. To try everything brilliant has to offer free for a full 30 days visit brilliant.org/fern or click on the link in the description. The first 200 of you will get 20 off of Brilliant's annual premium subscription. You always have your phone on you, which means Brilliant always gives you access to learn math and science anywhere even if it's only for a few minutes each day. You can improve your skills while in a tram, walking or while your significant other is trying to connect with you. We personally love the app. There's something

incredibly satisfying about really getting something about solving puzzle or logic problem. Why don't you give it a try.

Transcript of The Hunt for the King of the Dark Web

On the morning of July 5th, 2017, a man sits in front of his laptop in his villa in Bangkok. Online he is only known under a pseudonym: Alpha02. He is a multi-millionaire, lives a luxurious life and drives expensive cars. He feels safe in Thailand. Suddenly, he hears a loud bang in front of his house. A woman crashed her Toyota Camry into his front gate. He leaves everything behind and runs out of his house to the scene of the accident. A mistake with serious consequences. The driver is an agent of the Royal Thai Police force. FBI and DEA investigators have been waiting for this moment for months. Authorities from seven countries have worked relentlessly towards this day. Will the hunt for the king of the dark web finally come to an end? The Wired journalist Andy Greenberg has published the story on the hunt for the Darknet kingpin in a multi-part series. Additionally, there's a phenomenal Darknet Diaries episode on Operation Bayonet, which is covered in chapter 3 of this video. You can find both links in the description. It's the early 2010s. The dark web is picking up speed. The promises of anonymity and privacy are attracting more and more people. Thanks to Bitcoin, there is a new form of payment that isn't controlled by authorities. It's become easier than ever for criminals to sell their products online at a massive scale. With the advent of the dark web, the gigantic global game of cat and mouse began and it continues to this day. The Silk Road is perhaps the most legendary dark web marketplace to date. The platform went live in February 2011 and became incredibly popular. More than 100,000 customers bought drugs there, but only 2.5 years later, the operator of the site was caught and the Silk Road went offline. The authorities wanted to set an example in the fight against drugs. The Silk Road founder received a life sentence. But the business was too lucrative to drive away other operators. So after the closure of the Silk Road, the number of darknet markets exploded. They all fought for the top spot. Silk Road 2.0 was released just 35 days after the closure of its predecessor. The site survived less than a year. Evolution was another popular marketplace with a comparable size to the two Silk Roads. To buy things on evolution, you had to pay Bitcoin to an account on the platform, a kind of dark web escrow account. And once the items arrived to the customers, the sellers were paid. There was an incredible

amount of money with the platform operators at all times. At some point, these operators decided to steal this money, a so-called exit scam. Agora has also been named as a worthy successor to the original Silk Road. But the founders voluntarily took the site offline in August 2015. Business was getting too hot. Exit scams, arrests, voluntary withdrawals and hacks. All of these were benefiting a new emerging dark web market: AlphaBay. In July 2014, a man who calls himself "Alpha02" starts to develop AlphaBay. Only five months later, his platform goes live. Initially, only stolen credit card data is offered and sold, but AlphaBay quickly begins to offer more lucrative products. In addition to data and logins, there are now drugs, weapons and malware. Services such as money laundering are also offered. Few things are forbidden. But items or data related to child abuse hit-and-runs and stolen bank account information from Russia is strictly prohibited. Alpha02 probably doesn't want to mess with Russian law enforcement agencies. Maybe he also wants to pretend to be Russian in order to mislead investigators. The website itself works similar to Amazon. It is user-friendly, there are search functions, filters and categories. You are able to pay with Bitcoin, Monero or Ethereum. This is supposed to provide anonymity. AlphaBay even offers a so-called tumbler, purchases are blurred by bundling multiple transactions from different people. The platform works well and dominates the dark web. While other marketplaces popped up and disappeared. AlphaBay remains strong. The number of users is growing rapidly. Barely a year after it was founded, the site has more than 200,000 registered users and 40,000 sellers. In 2017 AlphaBay has over 300,000 items on their website and over half a million dollars in sales every day. Alpha02 is making money with every single transaction receiving a share between 2 to 4%. He becomes a multimillionaire. Right now, an entire team is working on AlphaBay. Alpha02 has a representative named "DeSnake", several moderators who handle disputes between buyers and sellers and a PR manager. With the site's explosive success the founder decides to retire from day-to-day operations. He renames himself. "Alpha02" simply becomes "Admin". From now on, communication only runs through "DeSnake". As Alpha02 retreats, American investigators are paying more and more attention to his true identity. Who is the powerful mastermind behind the platform ruling the dark side of the Internet? A hunt that stretches across the globe and will last for more than several years begins. You don't have to surf the dark web to find malware. The regular Internet is full of malicious ads and pop-ups. That brings us to NordVPN. NordVPN has many features, such as built-in threat protection, which can detect and block malicious ads and pop-ups on websites. With a VPN you can also change your location virtually. And that's super easy. You select a country, click on it, and you're surfing from the U.S. VPNs can also help you bypass many geoblockings. Streaming services have different catalogs in different countries. With NordVPN you can access all of those catalogs. This also works with news portals such as the New York Daily. The site cannot be accessed from most of Europe. So just select a server in

the US and you can read through their articles. At nordvpn.com/ferntv you can get an additional 4 months on a two-year plan and there's also a 30-day money-back guarantee. You also support our channel. So thank you. The American investigators want to find out where AlphaBay servers are located. With access to the servers they can close the platform or secretly infiltrate it and perhaps locate the operators. IP addresses provide information about the locations of users and servers. In closed networks like TOR. Website requests are routed through a number of random servers around the world. Routing through many servers cannot be traced back. It is purposely made difficult to find out where servers, operators and sellers are located. Because of that, the American investigators had to try a different way. They start browsing the platform and buy drugs anonymously, hoping for any mistakes by the sellers. Perhaps the product's packaging or postage stamps can provide clues to the identity of the respective drug dealer. Then they could arrest him. But these are just the small fish. Dealers come and go. Investigators want Alpha02. But the mastermind behind AlphaBay seems to take every precaution. He seems to know every rule of the game. So the investigators become desperate until December 2016. Robert Miller sits behind his desk in Fresno, California. He works for the DEA, the American Drug Law Enforcement Agency. He's working on AlphaBay. And until this day, it was a pretty thankless job. But suddenly, an email appears in his inbox. The sender is anonymous. It seems like Alpha02 made a fatal mistake in the early days of AlphaBay. Every user who registered on the website at the time received a welcome email. The email address of the true sender was visible in the metadata of this email. Although the error was immediately corrected, the anonymous tipster saved one of those first welcome emails. Maybe the tipster was one of Alpha02's first customers, maybe an operator of a competing site that got a hold of the mail somehow. Who knows? Anyway, he silently watched AlphaBay growing on the dark web, only to then hand the mail address over to the DEA. The email address is... pimp... pimp_alex_91@hotmail.com This email was the breakthrough for Miller and his colleagues. Via the email address, the investigators find photos from 2008 and 2009 of an "Alex" on Skyrock.com. That's a French-language social media platform. He also linked an old dating profile. The profile lists Trois-Rivières as his hometown. It is located in southern Quebec, Canada. According to the profile, he was 17 years old at the time. So the 91 in his email address could be the year he was born. He would have been 23 years old when AlphaBay was founded. The username "Alpha02" also appears on a French-language technology forum. In 2008 he explained how to remove a virus from an image. His email address is at the bottom of the post and also his full name. Alexandre Cazes. The investigators have his name, but where is he? They find Caze's PayPal account. He provided his private email address there as well. Through his LinkedIn profile, they also find out that he works as a freelance software designer. He also seems to run his own tech company called EBX Technologies. On Facebook the investigators find the profile of his

fiancee, a Thai woman. Apparently, the Canadian lives in Thailand. The clues lead investigators to the country's capital, Bangkok. With the help of Thai authorities, the investigative team identifies three properties owned by Cazes in the city. One house is located in a gated community. Alpha02 lives there with his wife. Then there's a second house and a 3 million worth mansion in the outskirts of Bangkok. He also has a holiday home in Phuket and is in the process of buying another villa in Cyprus. Investigators begin tailing him. The lifestyle of the multi-millionaire, includes several cars. Cazes enjoys driving around Bangkok in his Lamborghini. Agents watch him, follow his routes and track his iPhone. Whereas Cazes lives in a beautiful house of his wife, He invites his many affairs to one of his other houses in Bangkok. The investigators called that place the "Bachelor Pad". Cazes is an active member of a pickup artist forum. There, men give each other advice on how to be successful with women. Under the name Rawmeo Cazes publishes conservative family values and keeps a quasi-sexist live blog about his "successful" sex life. Other than that, his everyday life is quite normal. Pretty unspectacular for the King of the dark web. He gets up early, checks his social media accounts, works and is home a lot. From time to time, he attends a language course or goes out to eat with his wife. Around these routines, the authorities meticulously plan his arrest. In June 2017, a few weeks before the attack, a few American agents were sitting in the lounge of the 5-star Athenee Hotel in Bangkok. Suddenly Cazes appears. He parks his Porsche Panamera at the entrance and casually strolls through the lobby area straight towards the agents. There are thousands of hotels in Bangkok. Are they busted? Has the king of the dark web outwitted them? Cazes sits at a table a few meters away from the agents. They have never been so close to him. But he only meets for a business dinner. An incredible coincidence. At this point, no one suspects that just one month later, Cazes will be dead. AlphaBay is the largest darknet market in the world at this time. But there is competition. In Europe, the Hansa Market is growing rapidly, keeping European authorities busy. Dutch investigators find the servers of the Hansa Market thanks to a tip from a security researcher. They're located in a data center in the Netherlands. Unique opportunity arises. They monitor the servers, copy the data and dig through countless chat entries from the operators of the site. They find out that the operators are Germans, who probably still live in Germany. Together with the German Federal Criminal Police ("BKA"), the Dutch want to bring the Hansa Market under their control. But suddenly the Hansa Market disappears from the Dutch servers. The admins probably found out that their servers had been copied. In the chats of the operators the authorities also find a few Bitcoin addresses. They start tracking the transactions of these bitcoin wallets until they end up at a Dutch crypto exchange. They contact the exchange and ask for the data. The bitcoins lead to Lithuania. Together with the authorities there, the Germans and the Dutch try and locate the new servers. This time the authorities want to strike. But something unexpected happens.

The FBI tells European authorities about their plans to arrest Alpha02 and to shut down AlphaBay. "Operation Bayonet" is born. The operation is led by the FBI and DEA and involves the cooperation of law enforcement agencies from a total of 7 countries. Europol is also involved. The FBI is instructed to wait with the takedown of AlphaBay until the Dutch in cooperation with the Germans have taken control of the Hansa Market. If AlphaBay is taken down, Hansa would be swamped with new buyers and sellers. This is often the case in the dark web when a site closes or if there's an exit scam, customers and dealers simply move. But this time, customers and dealers would move to a site that's been hijacked by law enforcement. With that data, the Dutch could convict thousands of unsuspecting criminals. A honeypot. Alexander Cazes knows nothing. He continues to drive through Bangkok in his Lamborghini, writes nonsense in his favorite forum and cheats on his wife. On June 20th, 2017, the first part of the mission succeeds. The data center in Lithuania is stormed by Dutch forces. At the same time, German authorities arrest the two operators of the Hansa Market in Siegen and Cologne. The operators cannot warn anyone before their arrest. The Hansa Market is under Dutch control and nobody in the dark web knows about it. July 5th, 2017, Bangkok. It's time. There's a warrant for Cazes. Today, the Royal Thai Police, DEA and FBI will arrest him. Alpha02 could finally be put down after more than 2 years. A gray Toyota Camry drives down a dead-end road towards Cazes house with the Royal Thai Police force agent at the wheel. She tells the security guard that she took a wrong turn. She wants to turn around, but "unintentionally" causes a minor accident. The noise and chaos are supposed to lure Cazes out of his house. He's supposed to come out spontaneously without thinking about it. This part is important: In the optimal case, his devices should stay unlocked when he is getting arrested. If his hard drives were locked and encrypted, it would be difficult for authorities to access AlphaBay. Cazes leaves his house and approaches the Toyota. He has a cell phone on him. Suddenly, several officers try to catch Cazes. He attempts to run back inside, possibly to shut down his computer. But he's overpowered. The investigators run into his house and look for his laptop. It's in the bedroom on and not on Stand by. The officials have caught him. Alpha02 is still logged into the server hosting AlphaBay. Investigators searched the laptop and find multiple passwords for the AlphaBay website and servers. The Canadian had a fortune of \$23 million. Authorities confiscated his luxury cars, houses a hotel and millions in cryptocurrency. Cazes wife is charged. The Thai woman is accused of money laundering. [Trigger Warning Suicide - Skip Forward 20 Seconds] 1 week later, on July 12. Alexander Cazes is dead. He committed suicide while in custody. The King of the Dark Web is history. The shutdown of AlphaBay by authorities is being purposely kept secret for the time being when the platform is suddenly offline, no one knows why. An exit scam? A hack? Have the operators retired? As expected, countless users migrate to the other Darknet platforms, including the Hansa Market. For four weeks, the Dutch authorities

watched thousands of criminals trade on the platform. They collect valuable incriminating evidence. So on July 20th, 2017, the Hansa Market is shut down as well. On the same day, the US Department of Justice announces the end of AlphaBay and Hansa, a gigantic success for the global authorities. The dark web itself is not an evil technology just for criminals. We need places on the Internet in which whistleblowers and journalists are relatively safe. Marketplaces like AlphaBay or however still part of the picture. The global game of cat-and-mouse is far from over. The demand for illegal drugs, weapons, counterfeit money and malware is too high. It didn't take long for the Hansa Market and AlphaBay to be forgotten. Users flocked to other existing platforms. A number of new Darknet markets sprouted up and positioned themselves better than the former market leaders. The Russian Darknet market Hydra was at times more than twice the size of AlphaBay. In 2021, it was also shut down by German and American authorities. So now there's a new contest for the title of the King of the Dark Web. A promising contender is the "DeSnake". He relaunched AlphaBay in 2021 and still runs the darknet marketplace to this day.

Transcript of The Kids Who Hacked The CIA

it's October 2015 a chilly day in Autumn John Brennan receives a weird phone call it seems to be coming from a stranger he hesitates a second then picks up hello John Brennan who is this you're a lucer if John Brennan hadn't been John Brennan this might have looked like an ordinary prank call but John Brennan happens to be one of the most powerful men on Earth the head of the CIA who is this how did you get this number it was so easy bro you're such a d what do you want I don't want anything I already own you how much do you want we want \$5 trillion the US government will classify this call as part of a larger conspiracy of identity theft harassment of government officials and cyber terrorism the caller will pay a heavy price for this moment of trollish Glory why you doing this we want you to stop bombing the middle east across the Atlantic and a house in the West Midlands of England a 15-year-old kid in his room the phone still in his hand he can't believe what he just did he calls himself craer and he loves to smoke weed in fact he's high right now he's also the leader of krakas with Attitude he and his companions terrorized and embarrassed the US security apparatus to a near incomparable degree they leaked the personal data of police officers FBI agents and doj officials they hand delivered top secret documents to Julian Assange some of the most publicized activism attributed to Anonymous they call themselves Anonymous yeah it was actually them in part for the laws and this is their story this was political teenager Cyber attack hijacked the computers of several us intelligence andity colletive called crackers with attitude 2008 in Virginia a different kid who only calls himself default he is a pretty typical American Teenager he loves soccer video games and his dog he often clashes with his father who works in the government at some point default starts cheating in his video games this gives him the first taste of using computers to do things that you're not supposed to exciting powerful things he starts learning all that he can

about how computers work and how to get them to bend to your will 2008 was an exciting time to get into hacking a decentralized activist group Anonymous was in its Heyday if you managed to get into their secret chats you got a front seat view of their actions Anonymous is one of the biggest online vigilante group members hack into companies and government now a worldwide and widely recognized hacking group hackers with a group Anonymous citizens of the world we have seen the erosion of the process a cyber War anonymous anonymous anonymous has struck again young default is fascinated Anonymous embodies an exciting Spirit of Freedom through chaos they showed how you could force the whole world to pay attention without you having to leave your bedroom some Anonymous actions are political some are just trolling and default after tasting this very new kind of power is Keen to learn everything he can about hacking he starts to hack random websites just for the challenge of it just to see if he can but after hanging around anonymous's chats for a while he starts to find the group well cringe for one thing it's crawling with Feds people are getting arrested and it's tough to know who to trust Anonymous has become so big that vetting people becomes difficult there's tons of infighting and doxing since it's the only activist group most media Outlets know about Anonymous keeps getting credited for the work of other often more sophisticated hackers it's a mess so default gets involved with offshoot hacker groups one of them called Anon sec the group positions itself as anti- Anonymous but similar to Anonymous Anon SE performs operations hacking initiatives that sometimes have a political purpose and sometimes are just as one might say in 2008 for the Is I hated recording that Anon SE is quite Advanced and default gets better and better at the game the group controls a botnet a botnet is essentially a large pack of infected computers under someone's control you can use those computers to further spread malware across the internet to make the botnet larger and larger or you could for example attack a server with it in order to overload it default is tapping around Anon sex botnet and gets curious about what computers they've actually gotten under their control he finds that one is a server of the Canadian Medical School Windsor University suddenly default finds himself with direct access to the University's finances he pulls up records of students who owe the school money it all adds up to 9.4 million and at the bottom of the list something very tempting a delete all button how could he not push it these people might you know really enjoy having their slate wiped clean as it were um if you look some of them owe a substantial amount of money you know like 70,000 I think some people owed like upwards of like over 100,000 it's a lot of money you know what I'm saying it's just like Perpetual debt that sometimes it just lasts for decades so um just deleted everything I went into the PHP shell and just like sent everything to devnull just like shredded it so whatever I sent there is just not coming back this is from the podcast Darknet Diaries they have a fantastic episode with default of course course this story poses some questions we tried asking the university if the data was deleted they did not answer but usually student loans have multiple on and offline and offsite backups there should be hard copies of the student signed loan agreements however default feels like he's really doing something at the time there is a certain rush to committing a crime when it feels like doing the right thing other hackers might have used the sensitive student information to make a profit there's actually a shadow industry worth billions surrounding our most sensitive data so-called data Brokers gather all the info available about us on the internet your contact information browsing history and online transactions this data is often bundled into Shadow profiles which are then being sold you might receive a tailored mail or a robo call based on your Shadow profile in the worst

case someone might try to steal your identity incog helps you remove your data from the numerous lists of data Brokers the only thing you have to do is create an account and allow incog to act on your behalf afterwards you can easily track the status of all the requests in the dashboard check out inc.com fertv for an exclusive 60% discount on a one-year plan using the code Fern TV additionally benefit from a 30-day money back guarantee despite incog efforts some of your data might still linger online always remain cautious when sharing personal information anywhere by trying out incogni you're actively supporting our Channel more and more of default hacks are motivated by altruism rather than just curiosity as recently as 2014 bestiality was legal in Denmark other European countries Germany the UK Sweden had recently banned it what this meant for Denmark was an increase in animal sex tourism for years Danish animal rights activists tried to bring attention to this they called them dog brothel so sick it's so crazy and I had a dog so that really pissed me off just thinking about the fact what if someone took my dog and that happened to my dog I would freak out so as default describes it he and other Anon hackers lend their technical skills to the animal rights movement so we I think we took down the official Denmark Government website and then we actually um defaced it you know and said did you know that your government allows bestiality and there's bestiality dens where people can go and pay money to do these things to animals and most of them are like people's pets they shut down bestiality websites via dos attacks and tweet evidence of sexually mistreated animals the information reverberates around the world and is widely condemned Anonymous gets credit for Anon sex actions which deeply annoys default but it works in part due to the hacks more people know about Danish dog brothel they talk about them online protest them until the case winds up in Parliament in April 2015 Denmark finally bans bestiality while default is leveling up as a hacker he also becomes an early adopter of crypto he accumulates a significant amount of Bitcoin more than 1,000 this would amount to a lot of money today somewhere around \$40 million he keeps these Bitcoins on a hard drive in his room he also knows he's making powerful enemies so he gets a bit paranoid a bit fanatical with his opsac he never logs into his own Wi-Fi for one he uses a satellite dish to log into a free Dairy Queen Wi-Fi half a mile away he's always connecting through a tour note every time he turns off his devices he makes sure they're encrypted when he turns them back on he has to wait 30 minutes for them to decrypt for the most part he never tells anybody what he is doing he knows he has a lot to lose ultim Ely it won't be enough back in May 2013 a 29-year-old us intelligence contractor also has a lot to lose he has his own home in Honolulu a loving girlfriend and a salary of over \$200,000 per year but he's discovered a huge secret and it's too big to keep the US government has the ability to spy on pretty much any man woman child on Earth who has coming into contact with a computer and this contractor unwittingly has helped make that technology possible he's haunted by this information and horrified that his government is violating its public civil rights so egregiously he knows that revealing this information to anyone a lawyer a judge or even Congress would be committing felonies so severe that he would spend a lifetime in prison he's worried he'll never see his family again and he doesn't know what consequences they'll encounter if he Blows the Whistle but he has to do it he's been quietly collecting evidence of this secret for a while and he's just downloaded the last documents he tells his employer the US government that he needs a couple of weeks off to manage his epilepsy this buys him a bit of time to leave the country without arousing suspicion he chooses Hong Kong because he views it as a Bastion of free speech he believes it's one of the few

places in the world that could and would protect him from the Wrath of the US government there he meets journalists Laura pyros and Glenn Greenwald and delivers evidence of what used to be waved off as a conspiracy theory and so Edward Snowden becomes one of the most important whistleblowers of our modern time snowden's Revelations scandalize the world and Spark a long overdue debate about individual privacy versus National Security he inspires many Young Americans like default to take a good hard look at how their government functions default doesn't want to sit around and let surveillance happen to him he wants high-ranking intelligence officials to know what it feels like to be spied upon to have their private information stored and distributed and to have it used against them this is when he teams up with the krakas with Attitude founded by kraka the kid who's always high leerer England 2015 in a housing estate on the outskirts of a sleepy former mining town there's not a lot to do except get high or go online in the case of 15-year-old kraka he spends his time doing both he's angry about corruption about surveillance but in particular about the US's involvement in the Middle East he becomes especially focused on Palestine and sees the us as directly responsible for death and suffering in Gaza he decides to do something about it this was political we heard he was really angry about US foreign policy so he started a collective called crackers with attitude and then he hacked into sensitive documents online one of his first victims is James Clapper then the national director of intelligence of the Obama Administration Clapper one of the highest ranking members of the intelligence Community had his phone number and address waiting to be found with just one Google search this provides kraker with enough information to hack into his email he posts proof of it on Twitter which catches defaults attention Kracker then gets the phone calls to clapper's house phone rerouted to the free Palestine movement default tweets his respect to kraka and the two start chatting Edward Snowden himself has given James Clapper a very special shout out in an interview with the German broadcaster Ard unfortunately that interview was blocked from us and German television networks apparently the video is immediately taken down every time it's posted on YouTube so we'll only show the quotes visually I would say sort of the breaking point is seeing the Director of National Intelligence James Clapper directly lie under oath to Congress what we do not do is spy unlawfully on Americans or for that matter spy indiscriminately on the citizens of any country we only spy for valid foreign intelligence purposes as authorized by law with multiple layers of oversight to ensure we don't abuse our authorities kraa and default are livid kraka and other hackers Loosely connected with CWA team up to Target more high-ranking members of the intelligence Community they want to embarrass them and to show them that they aren't as powerful as they think they are at the top of their list is John Brennan head of the CIA Brennan like Clapper has enough information online that he basically doxes himself kraa looks up his publicly posted phone number and finds out it's a Verizon number he calls up Verizon's internal tech support and pretends to be an on-site technician who's having trouble helping a customer onsite tech support asks cracker for his employee code and he just makes one up on the spot it works the support technician provides KRA with access and suddenly he has has the account number the pin and John Brennan's private email address if you have just enough information on someone pieced together from different sources say their address and last four digits of their social security number you can easily change the passwords on all kinds of accounts and take it over and that's exactly what kraka does with Brennan's AOL account once he's in the email account kraka gets Brennan's private cell number and shares it with default and so they start spam calling the director of the

CIA relentlessly calling him and his family I told him he was a piece of sh basically like y are awful people like really like you're not doing any net positive things for the world you're just not John Brennan is freaked out sure the calls are a little more than a prank but how could he know that at the time nobody knew who was behind the calls or what their intentions were Brennan has to lay low for a while in hiding with extra security details for himself and his family at the same time kraa's breach into Brennan's email gives him access to sensitive documents kraa first post screenshots on Twitter but then egged on by default and may be asking himself what would Snowden do he decides to hit up Wikileaks Julian Assange himself takes interest he publishes the documents in October 2015 they include Brennan's 47 page sf86 application a sensitive form required for obtaining top secret government security clearance the form Reveals His criminal history psychological Rec records past drug abuse and other details nobody would want about themselves online not only that from Brennan's emails Wikileaks publishes Bush era recommendations for how the presidency should operate in the Middle East there's also an internal Congressional correspondence from the Senate select committee on intelligence that offered suggestions on how to make future interrogation methods also known as torture compliant and legal the breach cost the agency \$1.5 million in Damages and relocation costs as several operatives went into hiding but before they knew that there was basically no Threat Level above all it was widely embarrassing hacking into Brennan's email was laughably easy this is true and it's true that you guys have actually broken into his private email account how difficult would you say it is uh you mean out of 10 sure out of 10 one one it's a lot of I guess private information really pretty stupid really he's he's supposed to be so high in the government like head of CIA he should be more clever can you give us any indication of your background I mean how old you are you in the United States I mean anything you can tell me about yourself yeah um I'm Bel the age of 20 years old um I smoke pop and I live in America and and you smoke pot every day we wonder what John Brennan must have thought while undoubtedly watching this in his relocation house what Fury must have built up inside him the CWA aren't done they they release more and more information with control over clappers and other operatives accounts it's even easier to get people to give up information to inter access further accounts and databases they gain access to FBI's deputy director Mark Giuliano's account there they discover a database with personal information of 9,000 Department of Justice officials and 20,000 FBI agents they post it they then get access to the Justice Department's joint automated booking system which has records on all us prisoners they check out the records of fellow hackers like Jeremy Hammond and post those online as well they wreck havoc and embarrass one institution after another did these kids really think that they were going to get away with it at the time I really didn't care I just like that was towards the end of the run and was just like all bets are off you know had gone all the way down the rabbit hole I just become very disillusioned with people's complacency and their lack of care for what was going on so it's like we're going to bring attention to this with like chaos in [Music] Mayhem kraa knows his actions have poked a very big bear he knows there will be consequences he just doesn't know what they'll exactly be I'm going to go to Russia and with Snowden cuz I know that the government are pretty mad about this I'm probably going to get tortur I'm actually a pretty fast runner default is paranoid the whole time constantly worried about his obsc but he let his guard down default became involved with an ex-girlfriend of one of his friends according to him he asked his friend in advance if it's okay with him the friend says sure go for it he's way over it but he isn't default and his friend are

hanging out one night drinking and chatting over Xbox Live I slip up for the first time ever being arrogant and cocky it comes on the news CI director hack blah blah blah all this stuff and I'm like yeah that was us blah blah I was like drunk talking and just totally like gave myself away he never thought his friend would do anything with that information hell he didn't even think his friend would necessarily believe him but today default is pretty sure this friend turned him in when the FBI raids you they don't knock politely FBI agents entered a false room just as his computer finishes decrypting they're pointing assault rifles in his face they drag him out of his room flash copy his hard drive before it re-encrypts and sees all of his equipment default knows he's finished but the worst part watching the agents carry off his hard drive the hard drive with nearly 1,000 Bitcoin he blacks out kraka too gets raided by the British police forces and his computers are confiscated this team clear that go one other CWA member gets arrested in the US and three more in the UK since krco was underage and in the United Kingdom he got a lenient sentence he spent two years in a juvenile detention center he was the first minor in the UK to be imprisoned for hacking today he's keeping his head down and is done with crime he just wants to make a career in cyber security and move on with his life he did not want to give us an interview default even though he was less involved paid a much higher price he went straight to federal prison with a 5-year sentence he had to pay \$145,000 and restitution and due to co regulations spent a significant amount of that time in solitary confinement while pleading in court he said I thought what I was doing was right in terms of political justice but 2 years later I realized I was completely wrong Snowden 2 didn't have a relaxed time fighting asylum in Russia shortly after his leak intelligent officials publicly fantasized about killing him whether you're principled whistleblower who truly understands the significance of what you're leaking or stone teen furious at the world's injustices messing with the US government will change the course of your life forever so make sure it's worth it in December 2023 the Biden Administration renewed a very controversial surveillance program the ACT allows the administration to spy on anyone in the world without warrant including its own citizens it includes a vast database of electronic communications it's supposed to be accessed only when there's a legitimate reason to believe it will assist intelligence operations but a US Court ruling in 2023 found that the FBI has already misused this database 278,000 times unlawful searches were particularly rampant between 2016 and 2020 they've snooped in the private Communications of donors to various congressional candidates they've been watching suspected January 6 riers and they've also been surveilling black lives matter protesters maybe they're even surveilling us

Transcript of Why Amsterdam is Building a New Red Light District

this is the design of Amsterdam's new erotic Center commissioned by the city government in 2020 it's a concept for a 5 000 square meter high-rise with hotel rooms offices bars

entertainment facilities a store and a restaurant when it's finished it will be one of Europe's largest and most advanced brothels and as interesting as its design are the locations that it's being considered for locations on the outskirts of the city so why did Amsterdam's government commission the design of this new building Wyatt locations far from its historic red light Center and why are people so angry back in 2009 a labor politician waited the city was voting on a plan he had spearheaded a plan called project 1012 named after the zip code of the city's most notorious red light district it was designed to clean it up low quality buildings such as window brothels and coffee shops had to go but instead of making new regulations the lawmaker was praised for a unique approach his solution was spatial by a buildings associated with crime and push crime away the city government was convinced and his plan would pass little did they all know it would soon collapse over the course of more than a decade it would lead to the closure of more than a hundred individual window brothels along with tens of individual coffee shops however when attempts were made to measure the impact of project 1012 not much could be found it had a marginal impact on crime and today the center's image as an adult theme park with Shady edges still remain strong but if there's one thing his plan did do was that it created a rift among hundreds of sex workers in the city government of Amsterdam one that persists even as the newest mayor picks up the mantle again and tries to change the center even more in 2020 the city government banned organized tours of the red light district in May of 2023 bans on cannabis within the district entirely there's also been mandated bar closures bans on the sale and display of alcohol and even ad campaigns targeted towards young to middle-aged British men she in the executive body have even floated the idea of banning International tourists from buying marijuana in the city entirely she's also brought up the idea of introducing entrance gates to the red light district this would create the first physically regulated neighborhood in a major European city not even Venice does that but our most controversial suggestions started soon after her nomination in 2019 when she brought attention towards changing the rooms in the red light district again [Music] Amsterdam there are actually three separate red light districts the most well known is in the center called de Wallen which has 249 rooms but the other two and much less well-known are the single khobit and the rostkata which if 63 and 40 rooms respectively in 2019 femka halsima the newest mayor of Amsterdam presented four scenarios for the future of the Vala three of those scenarios targeted each of these districts in order to reduce over tourism her first scenario was to change window prostitution permanently Amsterdam closes all the curtains in the vola and single while the rooms stay open if a lot of the attraction to the red light district is simply to be able to walk around and look take away what people look at and you not only reduce potential tourists but push the tourists that do come to other parts of the city with increased digitization sex workers can increasingly rely on getting clients via their phones rather than off the streets the assumption is that this would just speed up an inevitable transformation from physical Windows to digital ones in her second scenario Amsterdam would see the most radical change all the rooms in the vola and single are removed and shifted to other parts of the city the number of rooms does not change like it did in Project 1012 but their locations do however because closing all the rooms in Nevada is highly unrealistic the city government is going forward with hulsimus third and most realistic scenario instead of all a chunk of the rooms in the vola and single are moved although it's more realistic the city government has not made it clear how large that chunk will actually be but different from Project 1012 alsama has made the commitment that when rooms get removed they have to come someplace new at the start the

government considered two building types a single unit high-rise and the second a cluster of different multi-function buildings they also commissioned Research into building on a floating Pavilion the design is meant to anticipate for about a hundred individual rooms for sex workers and also other entertainment facilities on the one hand the city wants to model Pasha when it comes to size Posh is the world's largest brothel however it's not a particularly welcoming or friendly looking building so on the other hand they also want to model the more modern less sketchy design of antwerp's largest brothel Villa Tinto but these brothels aside there's a few things that make Amsterdam's new erotic Center completely different the mayor of Amsterdam knows that a brothel is controversial this is why she hopes Amsterdam can make one with class and distinction by mixing hotel rooms with painting courses art exhibitions in a debate Center the hope is that they can avoid designing an isolated sex Palace for an actual physical model they commissioned Moog a Dutch architecture Studio to come up with a design The Architects giannisito and Jurgen tenhuva designed a concept that attempts to convert the linear streets of the red light district into a circular form inspired by Frank Lloyd Wright's Guggenheim Site when an architecture prize for making a design that repurposed two sugar silos into a cultural center with internal circular walkways the other architect was nominated for the same prize in 2018 for his design of a collection of buildings modeled after a monastery it was a network of buildings superimposed in Notre Dame that attempts to give an option for pedestrians to leave the busyness of the city together both Architects produce an interesting combination you get a building that kind of looks like a parking garage with A continuous walkway that allows you to walk in the building as you would in the vola but circularly as opposed to linearly also instead of a floor of the same individual homogeneous hotel rooms it also attempts to recreate the network of the buildings on the street on each individual floor as well to choose a location for the building the city government considered eight regions and as of today they've narrowed it down to two main locations and ASM in north and around the guy in zoud in North Amsterdam would have to deviate someone from the original Moog design and construct a floating brothel it's likely that it'll be a Bonton of around 100 by 20 meters with two thousand square meters of space for five total floors one basement One Roof Terrace and with the remainder holding the rooms and other facilities the government also considered repurposing a cruise ship since it would already be readily equipped with rooms bars theaters and attractions like casinos however a cruise ship has a large number of constraints making it an unlikely option and asm's preferred location comes from the fact that it's a diverse culturally rich neighborhood there's plenty of room for additional buildings such as for any needed security or additional parking but it also hosts one of the largest flea markets in Europe has multiple popular restaurants and cultural attractions and it also has a high density of mixed residential use areas nonetheless ndsm has a weakness its most immediate connection is via Ferry not only is that slower than other forms of public transport but a ferry can only withstand so many more people Amsterdam has considered Building Bridges to North but it's unclear how long that would take or if they'll ever be built at all so ndsm's main fault is its reachability but ndsm's biggest benefit is that it's considerably hipper than the other section of the city that's under consideration is the poshest and most entitled area of Amsterdam and offers two plots the grunozone a 2 000 square meter triangular piece of land and then a second likely the preferred option a 21 500 square meter plot of land owned by the city government directly unlike the singular Ferry Connection in Nord zet has access to two Metro connections one that goes from north to south giving potential clients from the center and

media access and it also has a Metro going from east to west granting direct access to Amsterdam's business district what it loses in being a hip and chill place to be it gains inaccessibility it also has ample parking space however what both North and South still have in common is that there are nimbies homeowners have voiced concerns about noise criminality and impact on children in the area some sex workers have also voiced concerns about their own safety according to the city government the building will likely be a safer option than the status quo instead of sparse separated buildings in an overcrowded neighborhood a single building would have a centralized security system with a clear oversight over who enters and who leaves the erotic Center does what project 1012 couldn't it gets rid of rooms in the center but without pushing sex workers into an unregulated underground also unlike the vola which makes his tourists with potential clients the new building is meant to attract primarily the clients some sex workers have complained that over tourism has reduced their incomes because large crowds make actual potential clients too self-conscious to consume according to the city government a well-connected but more isolated building reduce the attraction of the red light district for tourists attract more clients than in the center increasing sex workers incomes but it would also be quieter tourists are loud but clients are the type of people who want to be private and have as little attention drawn to them as possible however this is also where some more difficult problems emerge davola with all of its issues still has a unique Advantage there's a lot of eyes on the street in the same way that it may make some clients too self-conscious to consume it may do the same for more serious criminals and this is where you get the nimbies homeowners would like a building that's as invisible as possible this is why the mayor has also promised a closed isolated building that brings very little attention however the more isolated and quiet the area the more concerns about sex workers safety also the city already has problems with the number of police and security since the vola isn't entirely removed by building a neurotic Center you end up producing a fourth red light district which potentially spreads an already thin police force even thinner so the mayor has had problems she's faced considerable backlash at town halls and she's had to postpone making decisions on the erotic Center however since 2021 hulsma has had a majority in the government people can postpone and argue all they want but all three parties hunlings Des have agreed beat an isolated building cruise ship floating Pavilion North or in South some rooms in the vola must be removed and instead they must come somewhere new however a new erotic Center may not even be Amsterdam's most controversial plan the city government has also proposed replacing its historic famous public urinals with an advanced ai-powered urinal that comes out of the ground the story is fascinating and I've made an entirely different video on it that you can watch right now on nebula create your own streaming service where I'm posting the genius design of Dutch public urinals early as well as my future videos once you're there you can also check out my video on Corby Shay's plan for Gigantic Highway skyscraper and you can watch other exclusive videos made by channels like Neo mustard city beautiful and countless others nebula is great and I really cannot stress that enough it not only gives me the freedom to spend excessive amounts of time in a basement making videos for strangers on the internet but it also provides great videos that you can watch nowhere else and also classes so that you too can also learn how to make videos in your basement like I do untouched public urinals if you sign up using the link below you can support me directly and get both nebula and nebula classes for 40 off annual plan which is as little as 2.50 a month

VISUALS

Cinematic photorealistic 3D render, [NUMBER] glossy white featureless mannequin figures with smooth eggshell heads (no facial features), wearing detailed [UNIFORM TYPE] with [uniform details: badges, ties, duty belts, radios], [ACTION/POSE], in a [ENVIRONMENT with specific props], [LIGHTING DESCRIPTION], shallow depth of field, volumetric light, dust particles in air, cinematic color grade, Unreal Engine 5, octane render, 8K, anamorphic lens, shot on ARRI Alexa, [ASPECT RATIO]

MODEL THUMBNAILS
